Micro-Step (300 × 1 ~ 16 分割)

● Applicable motor

Characteristics

- **Compact driver**

Reduction in size of the micro step driver for the 3-phase stepping motor with a hybrid IC developed.

- **Micro-step function available**

Smooth operation and low vibration even at low speeds.

- **2 types of interface circuit specifications**

Photo coupler input type : PMDSA1S3P01

CMOS input type : PMDSA1S3C01

You can choose the PM driver depending on your controller.

Built-in Function

- **Step angle setting function**

The DIP switchpack is provided to select the basic step angle of the stepping motor from 5 resolution: 1 to 16 divisions.

- **Both-edges operation**

Load on the upper controller can be reduced by the both-edges operation (rising edge and falling edge) of the driver pulse when the micro step is used in 1/16 division mode.

Specifications of PM driver

Item			PMDSA1S3P01	PMDSA1S3C01	
Basic specifications	Input source	Main power	DC24V±10%		
		Control power	-	DC5V±5%	
	Source current		3A		
	Environment	Operating ambient temperature		0~+50℃	
		Conservation temperature		-20~+70℃	
		Operating ambient humidity		35~85%RH(no condensation)	
		Conservation humidity		10~90%RH(no condensation)	
		Vibration resistance		0.5G Tested under the following conditions, frequency range: 10 to 55Hz, direction: along the X, Y, and Z axes, for 2 hours	
		Impact resistance		Considering the NDS-C-0110 standard section 3.2.2 division "C", not influenced	
		Withstand voltage		Not influenced when AC500V is applied between power input terminal and	
		Insulation resistance		cabinet for one minute 10MΩ when measured with DC500V megohmmeter between	
		Weight		0.14kg	
		Functions	Selection function		Auto current down, step angle, pulse input method (optional)
	I/O signals	Command pulse input signal		Photo coupler input method, input resistance 330Ω Input signal voltage: H = 4.0 to 5.5V L = 0 to 0.5V Maximum input frequency: 50kpulse/s	CMOS input method Input signal voltage: H = 4.0 to 5.5V L = 0 to 0.5V Maximum input frequency: 50kpulse/s
Power down input signal		Photo coupler input method, input resistance 330Ω Input signal voltage: H = 4.0 to 5.5V L = 0 to 0.5V	CMOS input method Input signal voltage: H = 4.0 to 5.5V L = 0 to 0.5V		
Rotation monitor output signal		Open collector output by photo coupler Output signal standard, Vceo = 30V or less, Ic = 5mA or less	Open collector output by transistor Output signal standard, Vceo = 30V or less, Ic = 5mA or less		

Standard combined stepping motors

- For information about the general specifications and dimensions of each stepping motor, refer to its page.

Operation, Connection, and Function

● Each section name of the PM driver

PMDSA1S3P01 (photo coupler input method)

- ① I/O signal connector (CN1A)
..... Connect the I/O signal.
- ② DC source connector (CN2)
..... Connect the DC source.
- ③ Stepping motor output connector (CN3)
..... Connect the stepping motor drive line.
- ④ Function selection DIP switchpack (SL, F/R, A, B, C)
..... Select the function depending on your specification.

PMDSA1S3C01 (CMOS input method)

- ① I/O signal connector (CN1B)
..... Connect the I/O signal.
- ② DC source connector (CN2)
..... Connect the DC source.
- ③ Stepping motor output connector (CN3)
..... Connect the stepping motor drive line.
- ④ Function selection DIP switchpack (SL, F/R, A, B, C)
..... Select the function depending on your specification.

● External wiring diagram

PMDSA1S3P01 (photo coupler input method)

Note 1) Use twisted pair shielded cables.

Note 2) Switching between the "2-input method (CW and CCW input method)" and the "1- input method (CK, U/D)" is an optional function. For more information, contact us.

Operation, Connection, and Function

PMDSA1S3C01 (CMOS input method)

Note 1) Use twisted pair shielded cables.

Note 2) Switching between the "2-input method (CW and CCW input method)" and the "1- input method (CK, U/D)" is an optional function. For more information, contact us.

● Function selection DIP switchpack ---④

- The factory settings are shown in the figure above.
- Before changing the settings of the function selection DIP switches, turn off the source of the PM driver.

① SL (auto current down selection)

Select the auto current down function.

SL	Auto current down
ON	Enabled
OFF	Disabled

② F/R selection

This switch is not used.

Do not set it to OFF.

③ • ④ • ⑤ A, B, C (step angle setting)

Set the step angle

DIP switch			Step angle	Number of drive pulses per one period of phase current
A	B	C		
ON	ON	OFF	Basic step angle 1/1 (1.2°/pulse)	6
ON	OFF		Basic step angle 1/2 (0.6°/pulse)	12
OFF	ON		Basic step angle 1/4 (0.3°/pulse)	24
OFF	OFF		Basic step angle 1/8 (0.15°/pulse)	48
OFF	OFF	ON	Basic step angle 1/16 (0.075°/pulse)	48

- When the DIP switch "C" = "ON" (1/16 division), the internal circuit (stepping motor) operates at the rising edge and falling edge of the drive pulse.

If the duty ratio of the drive pulse moves out of the adjustment significantly by 50%, operation becomes unstable.

Operation, Connection, and Function

● I/O signal function ---①

Signal name (abbreviation)	Pin number (CN1)		Function
	フォトカブラ入力方式	CMOS入力方式	
Pulse input (CW)	1	3	Inputs the drive pulse for the rotation in the CW direction.
	2		
Pulse input (CCW)	3	4	Inputs the drive pulse for the rotation in the CCW direction.
	4		
Power down input (PD)	5	5	Inputting the PD signal turns off the current that flows through the stepping motor. Photo coupler input method: Internal photo coupler ON ...PD function enabled CMOS input method: Input of "L" level PD function enabled
	6		
Rotation monitor output (MON)	MON(collector) 7	MON(collector) 6	Turned on once for each period of the phase current. Turned on once for each 6 pulses when the division number is 1/1.
	MON (collector) 8		

- In the table, the photo coupler input method is for the PMDSA1S3P01 and the CMOS input method is for the PMDSA1S3C01.
- The CW direction of the rotation of the stepping motor is the clockwise direction when viewing the stepping motor from the output axis side (flange side). The CCW direction is the counterclockwise direction when viewing the stepping motor from the output axis side (flange side).

● Connectors to be used

PMDSA1S3P01 (photo coupler input method)

PM driver side		Model of applicable connector	Manufacturer
Used for	Model		
I/O signals (CN1A)	5045-11AG	Applicable housing :5051-11 Applicable contact : 2759PBG	Molex Japan Co., Ltd.
DC source (CN2)	B2P-VH	Applicable connector: VHR-2N Applicable contact : SVH-21T-P1.1	JST Mfg. Co., Ltd.
Stepping motor (CN3)	B3P-VH	Applicable connector: VHR-3N Applicable contact : SVH-21T-P1.1	JST Mfg. Co., Ltd.

- Please prepare the applicable connectors yourself or order the optional connector set or connector cables.
(For information on options, refer to page 15.)

PMDSA1S3C01 (CMOS input method)

PM driver side		Model of applicable connector	Manufacturer

- Please prepare the applicable connectors yourself or order the optional connector set or connector cables.
(For information on options, refer to page 18.)

Operation, Connection, and Function

PMSA1S3P01 (photo coupler input method)

Input circuit configuration (CW and CCW)

- Pulse duty: 50% or less
- When the crest value of the input signal is 5V, the external limit resistance R must be 0Ω
When the crest value of the input signal exceeds 5V, use the external limit resistance R to limit the input current to approximately 15mA.

Input signal specifications

Timing of the command pulse

- The internal photo coupler turns ON within the and, when the DIP switch "C" = "OFF," the internal circuit (stepping motor) operates at the rising edge of "ON" of the photo coupler.
- When applying the pulse to CW, turn OFF the CCW side internal photo coupler.
- When applying the pulse to CCW, turn OFF the CW side internal photo coupler.
- When the DIP switch "C" = "ON," the internal circuit (stepping motor) operates at the rising edge and falling edge of "ON" of the photo coupler.

PMSA1S3C01 (CMOS input method)

Input circuit configuration (CW and CCW)

- Pulse duty: 50% or less

Input signal specifications

Timing of the command pulse

- The "H" level is inputted within the and, when the DIP switch "C" = "OFF," the internal circuit (stepping motor) operates at the rising edge of the "H" level.
- When applying the pulse to CW, set the CCW side input level to the "L" level.
- When applying the pulse to CCW, set the CW side input level to the "L" level.
- When the DIP switch "C" = "ON," the internal circuit (stepping motor) operates at the rising edge and falling edge of "ON" of the photo coupler.

Operation, Connection, and Function

PMDSA1S3P01 (photo coupler input method)

● Input circuit configuration (PD)

- When the crest value of the input signal is 5V, the external limit resistance R must be 0Ω.
When the crest value of the input signal exceeds 5V, use the external limit resistance R to limit the input current to approximately 15mA.

● Output circuit configuration (MON)

- Rotation monitor signal output signal
Contact type: Open collector output by photo coupler
Contact capacity: DC30V, 5mA or less

PMDSA1S3C01 (CMOS input method)

● Input circuit configuration (PD)

● Output circuit configuration (MON)

- Rotation monitor signal output signal
Contact type: Open collector output by transistor
Contact capacity: DC30V, 5mA or less

Dimensions (unit: mm)

PMDSA1S3P01 (photo coupler input method)

PMDSA1S3C01 (CMOS input method)

Mounting direction and mounting position

- Use the mounting holes in the bottom of the PM driver with M3 screws as shown in the figure. (No mounting hardware is required.)
- The positions of the mounting holes are shown in the outline drawing above.

General specifications

	103H833□	103H8933□
Insulation class	B species(130°C)	
Insulation resistance	AC1000V or more when measured with a DC500V megohmmeter between the motor wiring and the frame at normal temperature and humidity.	
Withstand voltage	Not influenced when 50/60 Hz, AC1000V is applied between the motor wiring and the frame for one minute at normal temperature and humidity (leak current: 1 mA for 103H833□ and 10 ma for 103H8933□).	
Operating environment	Ambient temperature: -10 to +50_°C	
	Ambient humidity: 20 to +90% (no condensation)	
Winding temperature rise	80 K or less (Conditions depend on Sanyo standard.)	
Axial play	0.075 mm or less (load: 9N)	
Radial play (note 1)	0.025 mm or less (load: 4.4N)	
Shaft runout	0.025mm	
Concentricity of mounting spigot relative to shaft	ø0.075mm	ø0.075 mm
Perpendicularity of mounting surface relative to shaft	0.075mm	0.075 mm
Allowable thrust load	60N	100N
Allowable radial load (note 1)	220N	360N

Note 1: The load point is the position 1/3 from the output axis end.

Internal wiring and rotational direction

Applicable model: 103H833□

Direction of motor rotate

When the switch is set to CW with the wiring shown left, the rotational direction must be clockwise viewed from the output axis side.
When set to CCW, it must be counterclockwise.

3-Phase Stepping Motor Drive IC for Universal Controller

PMM3101

Micro step

Outline

The PMM3101 IC for stepping motor drive is a power hybrid IC (HIC) that consists of an energization mode generation circuit and a switching device to drive 3-phase stepping motors in a single package. It has been developed to facilitate the use of 3-phase stepping motors more easily so that you can easily configure a micro step drive device only with this HIC and a few peripheral parts.

Features

- Micro step sine wave drive driver
- Built-in current detection resistor
- Adopting MOSFET as the power drive device to reduce heat generation
- All-in-one package reducing the number of parts of the peripheral circuit
- 4 energization modes available with an external bit signal

Maximum ratings (T_C=25°C)

Item	Symbol	Condition	Rating	Unit
Source voltage-1	V _{CC1 max}	V _{CC2} =0V	37	V
Source voltage-2	V _{CC2 max}	Without signal	7	V
Input voltage	V _{in max}	Logic input terminal	7	V

Function of each terminal

Terminal name	Function	Input condition for operation
V _{ref}	Motor current setting input	–
Clock	Pulse input for motor drive	Operates at the rising edge
Hold	Pause input	Hold = "L" level
CW/CCW	Motor rotational direction setting input	"H" level = CW rotation "L" level = CCW rotation
Enable	Power off input	Enable = "L" level
Reset	System reset	Reset = "L" level

Energization mode table

Input condition		Energization mode	1 step angle (degree)	Basic step division number
Mode A	Mode B			
L	L	2EX	1.2	1
L	H	2-3EX	0.6	2
H	L	W2-3EX	0.3	4
H	H	2W2-3EX	0.15	8

Example of Application Circuit

Recommended circuit part constants

C1	C2	C3	C4
220μF	2.2μF	0.1μF	10μF

- For the R1 and R2 constants, determine the V_{ref} voltage according to the following equation.

$$V_{ref} (V) = \text{motor current adjustment value (A/phase)} \times 1.3$$
 Notice that 100Ω is recommended for R2 due to the configuration of the internal circuit of the PMM3101.
- Place the GND side of the source by-pass capacitor of VCC1 (C1) as close to pins 22 and 23 as possible to reduce noise.

3-Phase Stepping Motor Drive IC for Universal Controller

PMM3501

Micro step

Outline

The PMM3501 IC for stepping motor drive is a power hybrid IC (HIC) that consists of an energization mode generation circuit and a switching device to drive 3-phase stepping motors in a single package.

It has been developed to facilitate the use of 3-phase stepping motors more easily so that you can easily configure a micro step drive device only with this HIC and a few peripheral parts.

Features

- Micro step sine wave drive driver
- Built-in current detection resistor
- Adopting MOSFET as the power drive device to reduce heat generation
- All-in-one package reducing the number of parts of the peripheral circuit
- 5 energization modes available with an external bit signal

Output saturation voltage	V _{sat}	RL=23Ω	–	0.30	0.40	V
Output leak current	I _{OL}	RL=23Ω	–	–	0.1	mA
"H" level input voltage	V _{IH}	Pins 11 to 18	4.0	–	–	V
"L" level input voltage	V _{IL}	Pins 11 to 18	–	–	1.0	V
Input current	I _{IL}	Pins 11 to 18 = GND level Pull-up resistance:20kΩ	115	250	550	μA
V _{ref} input voltage	V _{IH}	Pin 10	0	–	V _{CC2} /2	V
V _{ref} input current	I _r	Pin 10 = 2.5 V Internal resistance:4kΩ	440	625	810	μA
"H" level MOI output voltage	V _{OH}	Pins 20 – 19 = 820kΩ	2.5	–	–	V
"L" level MOI output voltage	V _{OL}	Pins 21 – 20 = 1.6kΩ	–	–	0.4	V
PWM frequency	F _c	–	23	31	39	kHz

Function of each terminal

Function of each terminal	function	Input condition for operation
V _{ref}	Motor current setting input	—
Clock	Pulse input for motor drive	Mode C = "H": Rising edge operation Mode C = "L": Rising edge and falling edge operation
Hold	Pause input	Hold = "L" level
CW/CCW	Motor rotational direction setting input	"H" level = CW rotation "L" level = CCW rotation
Enable	Power off input	Enable = "L" level
Reset	System reset	Reset = "L" level
MOI	Rotation monitor output	"H" level output once for each phase current period

- The MOI output differs from the phase origin monitor output.

Energization mode table

Input			condition Energization mode	1 step angle (degree)	Basic step division
Mode A	Mode B	Mode C			
L	L	H	2EX	1.2	1
L	H	H	2-3EX	0.6	2
H	L	H	W2-3EX	0.3	4
H	H	H	2W2-3EX	0.15	8
H	H	L	4W2-3EX	0.075	16

- When Mode C = "L," 1 step operation is performed for each rising edge and falling edge of the Clock pulse.
If the duty ratio of the drive pulse moves out of the adjustment significantly by 50%, operation becomes unstable.

Example of Application Circuit

Recommended circuit part constants

C1	C2	C3	C4
470μF	6.8μF	0.1μF	10μF

- For the R1 and R2 constants, determine the V_{ref} voltage according to the following equation.
V_{ref} (V) = motor current adjustment value (A/phase) × 0.41
Notice that 100Ω is recommended for R2 due to the configuration of the internal circuit of the PMM3101.
- Place the GND side of the source by-pass capacitor of VCC1 (C1) as close to pins 27 and 28 as possible to reduce noise.
